

Spring Cleaning with billyGO

OUTDOOR HVAC UNITS

M-38424 | TACLB41879E | PATENT PENDING

Nature can be unpredictable, leaving fallen debris or excessive amount of leaves in or around outdoor HVAC units. Over time, this accumulation can negatively impact how well the units are operating.

Follow these steps once a year to keep the HVAC units running properly

STEP ONE

- Switch the power to OFF and wait for the blades to stop

STEP TWO

- Inspect the outside of the units, removing any sticks, twigs or leaves that have become stuck

STEP THREE

- Unscrew the fan from the top of the unit, carefully place it to the side and remove debris from inside the unit

STEP FOUR

- Remove the outer-covers and use a hose to spray the unit, washing away built up dirt and dust

STEP FIVE

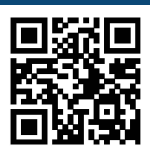

- If unit is especially dirty, commercial- grade cleaner can be purchased online

STEP SIX

- Once clean, place all removed pieces back into the correct position and turn the power back on
